

ASADBEEK KURBONOV

Backend Software Engineer

✉ qurbonovasadbek@gmail.com  [LinkedIn](#)  [GitHub](#)

SUMMARY

Backend engineer with three years of production Python experience across payment systems, data pipelines, and APIs (Django, FastAPI, Celery, Polars/Pandas). Also build high-performance services in Go where latency demands it — designed a Go-based surge pricing service with a Polars calculation pipeline at MyTaxi.uz. Comfortable with PostgreSQL, Redis, async processing, and microservices.

Based in Warsaw, Poland. NAWA Banach Scholarship recipient (competitive Polish government scholarship).

EXPERIENCE

MyTaxi.uz — Ride-hailing platform in Uzbekistan

Jan 2023 – Apr 2026

Software Engineer

- Designed and shipped end-to-end surge pricing service: Go/Fiber HTTP layer with Polars-based calculation pipeline. Achieved 50µs p99 response time and scaled throughput from 1,200 to 25,000+ RPS. (Go, Fiber, Polars)
- Automated partner fee disbursements via banking API integration, eliminating manual accounting errors and establishing single source of truth for transfers (Python, Celery, PostgreSQL)
- Diagnosed and resolved production billing-system issues across the payments stack; became the team's go-to for billing bugs.
- Contributed to Visa/Mastercard integration via Payze.io payment gateway.
- Designed and shipped BIN-based card classification for bank-promotion eligibility (Go).
- Contributed to scheduled orders feature, a large cross-team initiative.

Self Employed

Aug 2024 – Sep 2025

Software Engineer

- Built Django CRM for US logistics company, integrating fuel card payment processors via SOAP/FTP and reducing weekly invoicing from 2 days to minutes.
Stack and scope: Django backend, EFS SOAP API integration, Excel/PDF rendering pipeline, Celery workers for scheduled invoicing. (Python, Django, Celery)
- Designed invoice generation system handling 3 transaction types, configurable payment terms, and tax calculations across 20+ tenants. System has been the client's source of truth since February 2025.
- Automated logistics reporting with zero infrastructure cost (Google AppScript, Telegram Bot API)

EDUCATION

Polish-Japanese Academy of Information Technology (PJAiT)

Oct 2025 – Jul 2027

MSc in Computer Science

Warsaw, Poland

- NAWA Banach Scholarship recipient (competitive Polish government scholarship, full funding)

Tashkent State University of Economics

Sep 2019 – Jul 2023

Bachelor's in Economics — Full government scholarship

Tashkent, Uzbekistan

SKILLS

Languages: Python, Go, JavaScript, SQL

Frameworks: Django, FastAPI, Flask, Fiber, Gin

Databases: PostgreSQL, MySQL, Redis, SQLAlchemy

Cloud & Infrastructure: AWS (EC2, S3, RDS), Hetzner, DigitalOcean, Docker, Docker Compose, Linux

CI/CD: GitHub Actions

Messaging: NATS, RabbitMQ, Celery

Observability: Grafana, Prometheus, Loki

Other: REST API, GraphQL, WebSocket, pandas, polars, Git

Spoken Languages: English (C1), Russian (conversational), Uzbek (native)
